Symbolic Logic

Introduction:

This course on symbolic logic is a preliminary study of the formal systems used to represent and analyze logical reasoning. It's a foundational subject in philosophy and mathematics, providing tools for precise reasoning and argumentation. In this course, students learn about

propositional logic, which deals with the logical relationships between propositions (statements). They study the syntax and semantics of propositional logic, learning how to symbolize statements using logical connectives, and how to evaluate the validity of arguments.

Course Outcomes:

- Ability to translate the arguments in ordinary language to their respective symbolic forms by the use of propositional variables and logical constants.
- Gaining knowledge of the rules of logic and their symbolic forms.
- Ability to know different types of truth functions and the distinction between valid and invalid arguments.
- ability to derive conclusions from the given set of premises
- Ability to prove the validity or the invalidity of the given argument

Learning Outcome:

Unit-I Sometimes, arguments formulated in English or any other natural language are often difficult to understand, because of the ambiguity & vagueness of the words. and to solve these difficulties, Symbolic logic is the best medium to put the arguments in a symbolic form & comprehend it very easily.

Unit- II Propositional calculus is the part of symbolic logic. In Propositional calculus, we can determine whether the given proposition is tautology or not.

Unit-III Also, there are certain truth tables, which can evaluate whether the given proposition is valid or not. & the Predicate calculus appreciates how argument involving predicates can be formalized semantically & syntactically & how these are connected.

Unit-IV In this unit, we deal with certain formulas & basic concepts prescribed by George Boole to solve algebraic problems.

Course Components:

Unit-I: Chapter- I- Introduction (Sections 1 to 4).

Chapter- II- the Calculus of Propositions (Sections 1 to 5).

Unit- II: Chapter-III - Calculus of Propositions (Sections 1 to 6).

Unit-III: Chapter-IV - Calculus of Propositions (Sections 7 to 9).

Chapter- V = the Elements of Predicate Calculus (Sections 1 to 9).

Unit-IV: Appendix (Sections: 1 to 4).

Semester VIII

Existentialism and Phenomenology

Introduction:

This course on existentialism and phenomenology is a preliminary study of two influential philosophical movements of the 20th century that focus on human existence, experience, and consciousness. By studying existentialism and phenomenology, students gain insights into fundamental questions about human existence, subjectivity, and meaning, while also developing critical thinking skills and an appreciation for the diversity of philosophical approaches to these issues.

Course Outcomes:

1. Knowledge of the problems concerning existence and the position/stand taken in existentialism;
2. Understanding of different concepts as dealt with by thinkers (as specified in the course) in existentialism and phenomenology.
3. Ability to compare, analyze, and evaluate the existentialist positions of the thinkers.

Learning Outcome:

Unit-I: Students will understand the phenomenological method developed by Husserl, including the process of bracketing or epoché, which involves suspending presuppositions and judgments about the world. Examine Husserl's theory of essences, which posits that essences are the invariant features that define the identity of a given phenomenon. Explore the implications of Husserl's rejection of psychologism for his phenomenological approach to philosophy and science.

Unit-II: Students will understand Husserl's concept of intentionality as the directedness of consciousness towards objects. Examine Husserl's notion of the life-world (Lebenswelt) as the pre-theoretical, intersubjective horizon of everyday experience. Analyze the relationship between noema and noesis in Husserl's account of intentionality and its role in the constitution of meaning. Examine Husserl's approach to ethics within the framework of phenomenology.

Unit-III: Students will understand Heidegger's approach to phenomenology, which he develops in dialogue with Husserl's method. Examine Heidegger's concept of Dasein, which he defines as the being. Understand Heidegger's understanding of being as a process or event rather than a static substance. Examine Heidegger's account of human existence as being in the world, which emphasizes the inseparability of self and world. Understand Heidegger's concept of temporality (Zeitlichkeit) as the horizon within which Dasein's existence unfolds.

Unit-IV: Students will understand Sartre's adaptation of the phenomenological method, which he employs to analyze the structures of human consciousness and existence. Examine Sartre's magnum opus, "Being and Nothingness," which provides a comprehensive account of his existential philosophy. Understand Sartre's concept of radical freedom, which he famously summarizes as "existence precedes essence." Examine Sartre's concept of bad faith, which refers to the self-deceptive strategies individuals employ to evade their freedom and responsibility.

Course Components:

Unit-I: Husserl's Phenomenology: Method, Theory of Essences, Critique of Psychology.

Unit- II: Husserl's Phenomenology: Intentionality, Life-world, noema and noesis, Ethics.

Unit-III: Heidegger: Phenomenological Method, the CONCEPT of BEING (DASEIN), the Process of Being, Man as Being in the World.

Meta-Ethics

Introduction:

This course on meta-ethics will give a preliminary Idea on the fundamental issues of the nature, status, and meaning of ethical language and judgments. The course would begin with an overview of meta-ethical questions. In this course, students would be engaged with some key figures in meta-ethics, analyze philosophical arguments, and participate in discussions to deepen their understanding of the complexities of ethical discourse and inquiry.

Course Outcomes:

Unit-I: Meta Ethics tries to find out what counts as right and wrong while applied ethics aims at further defining what is right and wrong according to our individual preferences (or society's conventional values). Metaethics does not directly apply to any particular situation and can be used with any branch of ethics.

Unit- II: Ethical cognitivists hold that ethical sentences do express propositions: that they can be true or false.

Unit-III: Ethical non-cognitivism claims that prescriptions have a different nature than descriptive sentences; they have no truth values, they do not describe anything, and they have a different illocutionary role

Unit-IV: Supernaturalism, also called the divine command theory, says that moral judgments describe God's will. Calling something "good" means that God desires it. Ethics is based on religion. The Ten Commandments are from the Old Testament; they express God's will and the moral rules

Introduction:

This course on Symbolic Logic: Quantification Theory will provide a preliminary formal study of logical quantifiers and their role in expressing general statements about objects within a domain. It shall help explore applications of quantification theory in various fields, such as mathematics, computer science, linguistics, and philosophy. This could involve discussing how quantification theory is used to formalize mathematical proofs, analyze programming languages, or express statements about the semantics of natural language.

Course Outcomes :

1. Ability to translate arguments to their respective symbolic forms in propositional logic.
2. Ability to translate A, E, I, and O propositions by the use of quantifiers
3. Ability to prove the validity of arguments.
4. Ability to derive the required conclusion from the given propositions in propositional logic and Quantification theory.

Learning Outcome:

Unit-I

Define singular propositions as statements that refer to specific individuals or objects. Define general propositions as statements that apply universally or conditionally to classes of objects or individuals. Define validity as a property of deductive arguments where the conclusion necessarily follows from the premises. Identify different methods for proving the validity of deductive arguments, including truth tables, formal proofs, and logical equivalences. Introduce preliminary quantification rules for manipulating quantified propositions, including rules for negating quantifiers, distributing quantifiers over logical connectives, and instantiating quantifiers.

Unit-II

Distinguish between valid and invalid arguments, recognizing that an invalid argument can have true premises and a false conclusion. Identify different methods for proving the invalidity of deductive arguments, including counterexamples, truth tables, and formal proofs by contradiction. Define multiply-general propositions as statements that involve multiple quantifiers, such as propositions that contain both universal (\forall) and existential (\exists) quantifiers. Introduce quantification rules specifically tailored for multiply-general propositions, including rules for nested quantifiers, mixed quantifiers, and multiple quantifiers in the same proposition.

Unit-III

Apply the universal instantiation rule to instantiate universal quantifiers (\forall) with specific individuals or objects. Apply the existential generalization rule to introduce existential quantifiers (\exists) and assert the existence of objects satisfying certain conditions. Apply the existential instantiation rule to instantiate existential quantifiers (\exists) with specific individuals or objects. Apply the universal generalization rule to generalize from specific instances to universal claims.

Unit-IV

Apply techniques for recognizing fallacies and avoiding invalid reasoning in logical analysis. Understand the role of counterexamples in proving invalidity. Identify examples of logical truths involving quantifiers, such as tautologies involving universal quantification (\forall) and existential quantification (\exists).

Course Components:

Unit-I: Singular Propositions and General Propositions; Proving Validity; Preliminary Quantification Rules.

Unit- II: Proving Invalidity; Multiply-General Propositions.

Unit-III: Quantification Rules: Universal Instantiation; Existential Generalization; Existential Instantiation; Universal Generalization.

Unit-IV: More on Proving Invalidity; Logical Truths Involving Quantifiers
